

# Average Age of Citywide Infrastructure

Depreciation represents an estimate of the useful life of an asset on a straight-line basis. The estimated useful life for selected City assets range from 50 years for its water and sewer system, to 20 years for its road system.

Indicator Score = Yellow/Same

## TREND ANALYSIS:

The average roadway in the City is just over 12 years old, meaning that it is more than halfway through its useful life of 20 years. The average age of water & sewer infrastructure is just over 24 years old of an estimated 50-year lifespan. As shown above, the City's assets are about 50% through their useful life.
