'Magyar' Ginkgo (*Ginkgo biloba*)

Origin: Princeton Nursery (NJ), native to China

Mature Size: Large (>45' tall)

Description: 'Magyar' ginkgo was selected for its upright growth form and seedlessness. Ginkgos are relatively slow-growing, long-lived trees tolerant to a wide range of environmental conditions. They do not have any serious disease or pest problems. 'Magyar' is a male cultivar that does not have the messy seeds that female ginkgos produce. Fall color is yellow.
